Dear colleagues

FIDIC's latest State of the World report

Net Zero "What next?" FIDIC launched its fifth State of the World report, Net zero "what next?", at a webinar on 28 October 2021, which asked what is next after net zero and discussed the kind of ambitions the engineering sector and society should be looking to achieve going forward. Commenting on the State of the World net zero report, FIDIC president Anthony Barry said: "The climate challenge we face is global and significant and that is why FIDIC has taken the decision to publish a Climate Change Charter and also to ensure that our core value of sustainability is built into all FIDIC's activity." Barry also highlighted that though 2020/2021 will be remembered for the Covid pandemic, another important emerging trend has also been developing, namely an increase in the "recognition, perception and importance of addressing the climate emergency".

Dear colleagues

FIDIC's latest State of the World report

Net Zero "What next?" FIDIC launched its fifth State of the World report, Net zero "what next?", at a webinar on 28 October 2021, which asked what is next after net zero and discussed the kind of ambitions the engineering sector and society should be looking to achieve going forward. Commenting on the State of the World net zero report, FIDIC president Anthony Barry said: "The climate challenge we face is global and significant and that is why FIDIC has taken the decision to publish a Climate Change Charter and also to ensure that our core value of sustainability is built into all FIDIC's activity." Barry also highlighted that though 2020/2021 will be remembered for the Covid pandemic, another important emerging trend has also been developing, namely an increase in the "recognition, perception and importance of addressing the climate emergency".

Against this background, FIDIC has taken action to produce its latest State of the World report and also a new Climate Change Charter which will be launched very soon. FIDIC urges the industry and FIDIC member associations to sign up to the charter to strengthen the global response to climate change.
